

Siraj Abdul-Shahid(TechMaestro)
SC-900 Lab: Configuring an Azure DDoS Protection Plan
10/16/2024

Introduction

In this lab I will be using the lab environment in Microsoft Azure to create a DDoS protection plan, an Azure VNet, and applying the DDoS to the VNet.

Definitions

DDoS (Distributed Denial of Service) Protection Plan

- The aim of a Distributed Denial of Service (DDoS) attack is to overwhelm the resources on your applications and servers, making them unresponsive or slow for genuine users. A DDoS attack will usually target any public-facing endpoint that can be accessed through the internet.
- The Azure DDoS Protection service is designed to help protect your applications and servers by analyzing network traffic and discarding anything that looks like a DDoS attack.
- DDoS protection is especially important for any other resources that are associated to IP-addresses.

VNet (Virtual Network)

- A virtual network is a container that holds other networking components and configurations.

1. Created an Azure DDoS protection plan:
